

Solar Rebate Program

Within the next 20 years, world-wide energy demand is expected to expand by more than 50 percent.

Photovoltaic (solar-electric) technologies offer an excellent alternative to traditional means of generating electricity. They convert light directly to electricity without moving parts, noise or pollution. They have a lifetime expectancy of 30-plus years, and are readily adaptable to a variety of applications, according to the Washington Solar Electric Industry.

Klickitat PUD is working toward becoming less dependent on generation sources that may not be able to assure enough power for our growing needs. To this end, the PUD is looking toward more local and renewable generation sources.

In line with this vision, Klickitat PUD is pleased to offer customers a rebate program for solar installations.

Rebates are based on \$400 per kilowatt of installed rated output of the system. This goes up to a maximum of \$1,200, and has to offset an existing electrical load, and be a grid-tied installation.

As with other rebate programs Klickitat PUD offers, financing for the installation is available for 4.9 percent for qualifying customers.

Following are the basic program requirements and amounts. For a packet of information, please contact Miquette Ihrig at (509) 773-7622 or (800) 548-8357.

We look forward to your participation in this program.

Program Requirements:
Existing structures only with grid tie application.

Klickitat PUD pays \$400 per kilowatt or an increment thereof (see chart below for examples) up to a maximum of \$1,200 per residence or business structure. ■

Size in Kilowatts	Customer Rebate
.6	\$240
.8	\$320
1.0	\$400
1.5	\$600
1.8	\$720
2.7	\$1,080
3.0	\$1,200
